

RPS-7000

Regenerative AC/DC Power Systems

High Power. High Performance.

Built for Mission-Critical Testing.

Regenerative

Easy Use

Compliance

High Range

Constant Power

High Current

KEY FEATURES

- Output Power: 9 kVA – 22.5 kVA per unit
- Scalable Power Capacity up to 225 kVA
- Output Voltage: 0 – 350 V; 0 – 400 V (Optional)
- Frequency: DC, 30 – 150 Hz; 30 – 1000 Hz (Optional)
- Maximum current increased by 35%
- Key component cooling efficiency + 20%
- Parallel connection for high power capacity
- Output Modes: Single-phase, three-phase, or split-phase (up to 200% of rated voltage)
- Three Operating Modes: Constant Voltage, Constant Current, and Constant Power
- LIST, STEP, PULSE, and TRANSIENT modes
- Arbitrary Waveform Editing & Power Line Disturbance (PLD) Simulation
- Harmonic disturbance/waveform superposition
- Harmonic Analysis: Voltage and current measurements up to the 50th harmonic
- Compliant with Grid Connection Standards such

as LVRT, Phase Shift, Frequency Variation, Harmonic Injection

- Standards Compliance: IEC 61000 -3-2/-3-3/-3-11/-3-12/-4-11/-4-13/-4-14/-4-28/-4-34 testing
- Interfaces: USB, LAN, GPIB, CAN, and Std I/O

Applications:

- AI server, Data center, and HVDC applications
- EV chargers, BOBC, V2G, V2H, V2X, EV charging cables and components
- Solar PV inverters, grid-connected inverters, and wind power systems
- Industrial and residential Energy Storage Systems (ESS), Power Conversion Systems (PCS)
- Uninterruptible Power Supplies (UPS) and Power Distribution Units (PDUs)
- Regulatory Testing: IEEE 1547, UL 1741, IEC 62116, etc.
- Micro-grid Testing, PHIL (Power Hardware-in-the-Loop), and Anti-Islanding Protection.

Introduction

The RPS-7000 is a high-performance regenerative AC/DC power source and load system designed for advanced power testing applications. It supports four-quadrant operation, enabling both source and load functions with energy recovery back to the grid. With power ratings from 9kVA to 22.5kVA per unit and up to 225kVA through parallel operation, the RPS-7000

Platform	Application Example	Conventional 35A Systems	RPS-7000 Series (48A per Phase)
 7.4kW (230V / EU)	Residential AC Charger / OBC	2 UNITS	1 UNIT 
 11kW (208V / US)	Commercial AC Charger / OBC	2 UNITS	1 UNIT 
 22kW (208V / US)	High-Power AC Charger / OBC	3 UNITS	2 UNITS 

Figure 1: More Current. Fewer Units.

delivers high current, precise waveform control, and reliable performance for AI servers, EV charging, energy storage, and power electronics validation. Available configurations include G Series, L Series, S Series, and B Series.

Applications

The RPS-7000 Series provides comprehensive testing support for modern power electronics R&D and production. In the renewable energy sector, it serves as a critical tool for testing Solar PV inverters, Power Conversion Systems (PCS), and Energy Storage Systems (ESS), enabling precise grid anomaly simulation and efficient energy recovery. Its 4-quadrant operation is also ideal for verifying the bidirectional charging and discharging performance of On-board Chargers (OBC/BOBC) and various V2G, V2H, and V2X equipment.

For digital infrastructure, the RPS-7000 is an optimized power solution for AI servers, Data Centers, and High-Voltage Direct Current (HVDC) applications. Supporting AC, DC, and AC+DC modes, it accurately simulates the voltage ripples and load transients of high-voltage DC buses, ensuring the power stability of high-density computing hardware. Furthermore, the built-in regulatory waveform library automates compliance testing for IEEE 1547 and UL 1741, facilitating everything from basic performance verification to advanced Power Hardware-in-the-Loop (PHIL) simulations.

Figure 2: Power Shelf Test Architecture

Constant Power and High Current output

The RPS-7000 utilizes next-generation SiC MOS technology, supporting voltages up to 400 VL-N, and for higher voltage applications such as wind power systems, line voltages up to 690 VL-L. Its constant power output capability ensures high current at low output voltages and low current at high output voltages, eliminating the need for manual switching between high and low voltage ranges. Compared to traditional systems that experience output interruptions during range transitions, the RPS-7000 provides seamless operation for real-world applications.

The optimized power stage increases maximum output current by 35% and delivers 100% full-power output at 200–240 Vac without derating. Unlike conventional programmable power systems, which may be limited to 80%, 60%, or even 0% output capability under the same low-voltage conditions, the RPS-7000 maintains full performance for demanding high-current applications. This architecture enables reliable testing of AI server power supplies, EV charging systems, battery platforms, and next-generation power electronics while maximizing usable output power.

Figure 3: Full Power Across the Voltage Range

Parallel Connection for High Power

The RPS-7000 supports multi-unit parallel operation to increase power output rating, meeting a wide range of testing requirements. Using real-time active current-sharing technology powered by a Digital Signal Processor (DSP) and high-speed communication, the system can achieve up to 225 kVA of total power. When operating in parallel, all functionalities and precision remain unaffected. Additionally, the units can be connected with a single cable, and upon enabling the parallel mode, the system automatically configures itself without requiring complex additional setup.

Intuitive Control & Advanced Analysis

The RPS-7000 features a 5-inch touchscreen paired with a physical rotary knob, providing an intuitive interface for seamless switching between waveform editing, real-time measurements, and regulatory configurations. This user-friendly design allows for rapid system familiarization and efficient operation across diverse testing environments.

Figure 4: Waveform Monitoring Function

For optimized product design, the RPS-7000 integrates real-time waveform monitoring and high-precision harmonic analysis, eliminating the need for external oscilloscopes. It can simultaneously capture and display three-phase voltage and current waveforms, providing immediate visibility into system performance.

Figure 5: Harmonic Real-time Analysis List

The series also offers advanced diagnostic capabilities, including total harmonic distortion (THD)

measurement and detailed analysis up to the 50th harmonic. By providing precise amplitude and phase data for individual harmonic components, the RPS-7000 empowers engineers to accurately identify and mitigate interference, ensuring the highest level of power quality and compliance.

AC/DC Load Simulation

The RPS-7000 Model L regenerative electronic load is suitable for a wide range of renewable energy testing applications. In addition to basic functions such as constant current, constant power, and constant impedance, it supports advanced load simulation capabilities, including inductive and capacitive load emulation, as shown in Figure 6. Users can simulate complex load scenarios to accurately test device performance under varying voltage and current conditions, including load angles, load removal, and cycle settings.

Figure 6: Multi-Mode Load Simulation

Moreover, its unique integrated harmonic and disturbance simulation can generate various harmonic components to evaluate the power supply's capability to handle diverse harmonic loads.

Combined with the versatility of AC/DC load simulation, the RPS-7000 Model L meets diverse application needs, such as testing electric vehicle supply equipment (EVSE), onboard chargers (OBC),

and uninterruptible power supplies (UPS). Its regenerative design eliminates the energy wastage and cooling requirements typical of traditional resistive loads, significantly enhancing efficiency.

Arbitrary waveform Editing

RPS-7000 Series provides advanced programmable power simulation for R&D, compliance, and laboratory applications. It supports List, Step, Pulse, Transient, Harmonic Synthesis, and Inter-Harmonic modes with independent phase control, enabling flexible test scenarios while supporting compliance verification to standards including IEC 61000-4-3, IEC 61000-4-11, UL 1741 SA, IEEE 1547, and IEC 62116.

Figure 7: List Mode Waveform

Step mode, which incrementally adjusts voltage or frequency to evaluate the device's response under different conditions. Pulse mode, which generates short-duration high-voltage or high-current pulses for surge testing. Additionally, the Inter-Harmonic mode simulates harmonic disturbances in power systems to assess the device's tolerance to harmonic interference, while the Transient mode replicates instantaneous power system responses to test the device's ability to handle rapid changes effectively. Synthesis mode provides flexible custom waveform design functions.

Users can use the intuitive programming

interface to accurately adjust the amplitude and phase of each harmonic order to generate a multi-order harmonic composite waveform. This mode supports up to 50th order harmonic components, helping testers simulate non-sinusoidal power environments to meet different testing needs.

PowerVUE Remote Control Software

The RPS-7000 is equipped with PC-based software, PowerVUE, which allows users to operate the device directly from their PC. With PowerVUE, users can easily adjust parameters, monitor performance, quickly create test programs, and generate reports. The software also provides pre-configured test modes for standards such as IEC 61000-4-11, 4-13, 4-14, 4-28, and 4-34. This enables users to operate the system according to regulation-defined parameters, ensuring compliance with various international standards.

Figure 9: IEC61000-4-11 Dips Setting

Standard SCPI & LabVIEW driver support

The RPS-7000 supports the SCPI standard protocol, enabling seamless integration into existing test systems via GPIB, LAN, or External IO interfaces using SCPI commands without requiring complex modifications. Additionally, the RPS-7000 supports LabVIEW for testing, measurement, and control applications.

AIoT Intelligent Predictive Diagnostics

PowerSense AI enables real-time health monitoring and Predictive Preventive Service (PPS), continuously analyzing system behavior to detect hidden risks before failure occurs. By identifying abnormal trends in power modules, cooling systems, and operational parameters, it helps maximize equipment availability beyond 95%, reduce unplanned downtime, and protect critical R&D schedules.

Figure 10: PowerSense Predictive Diagnostics

Certified Manufacturing Excellence

Manufactured in Taiwan under IEC 62443-4-1, TL 9000, ISO 27001, and IATF 16949 certified systems. Every RPS-7000 Series unit undergoes rigorous engineering verification and validation workflows aligned with TÜV standards, ensuring consistent performance, production quality, and long-term reliability in demanding test environments.

	Operating Humidity(*10)		0% to 95% RAH		
REGULATORY COMPLIANCE	Safety		Low Voltage Directive 2014/30/EU, EN 61010-1:2017		
	EMC		CE marked for EMC Directive 2014/30/EU per EN 61326-1:2013 Class A		
	CE Mark LVD Categories		Installation Overvoltage Category: II; Pollution Degree: 2; indoor use only.		

Note.

- *1 Tested on input voltage 380Vac with full output power
- *2 Maximum distortion is tested on output voltage 350Vac with full output power under linear load
- *3 With respect to changes in the rated range of input voltage.
- *4 Load regulation is tested by sine wave and remote sense
- *5 At working voltage 125V

- *6 When the output voltage is greater than 40V
- *7 Current total harmonic distortion is tested on input voltage 220Vac with full output power
- *8 Power factor is tested on input voltage 220Vac with full output power
- *9 Efficiency is tested on input voltage 380V and output voltage 250Vac with full output power under linear load
- *10 In the state of non-condensing

The above specifications are subject to change without prior notice.

	EMC		CE marked for EMC Directive 2014/30/EU per EN 61326-1:2013 Class A			
	CE Mark LVD Categories		Installation Overvoltage Category: II; Pollution Degree: 2; indoor use only.			

Note.

- *1 Tested on input voltage 380Vac with full output power
- *2 Maximum distortion is tested on output voltage 350Vac with full output power under linear load
- *3 With respect to changes in the rated range of input voltage.
- *4 Load regulation is tested by sine wave and remote sense
- *5 At working voltage 125V

- *6 When the output voltage is greater than 40V
- *7 Current total harmonic distortion is tested on input voltage 220Vac with full output power
- *8 Power factor is tested on input voltage 220Vac with full output power
- *9 Efficiency is tested on input voltage 380V and output voltage 250Vac with full output power under linear load
- *10 In the state of non-condensing

RPS-7000 Dimensions

- 1 GPIB/CAN Optional Card
- 2 External I/O (AC_ON, FAULT-OUT, Ext-ON/OFF, etc.).
- 3 Parallel Communication Interface
- 4 Type-B USB, Network control interface

Ordering Information

* Special specifications, please contact the INFINIPOWER Tech. office or your local distributor

*1: 200-220 V L-L input available for RPS7018 parallel up to 180 kVA.

Accessories list

Typical Delivery Items	Optional accessories
■ Regenerative Power System ■ USB cable (Type A to Type B) (1.5m) ■ LAN cable CAT5E(2m) ■ DB25 adapter board (for I/O signal) ■ Test Report ■ Certificate of Compliance ■ Output shorting adapter (for single phase mode)	■ Parallel cable (Display port) (1.2m) ■ CAN Bus interface card / CAN Bus cable(1.5m) ■ GPIB cable(1.5m) ■ DB25 (male to male) adapter ■ RPS-7000 series input power cable (3m) ■ Output voltage calibration fixture(Remote sense cable)

* Special specifications, please contact the INFINIPOWER Tech. office or your local distributor

About INFINIPOWER

With 20+ years of R&D expertise in power testing, INFINIPOWER team delivers industry-leading solutions with trusted performance, precision, and stability. Backed by world-class manufacturing and TÜV certification, INFINIPOWER empowers customers—powering trust, driving innovation in the new energy era.
